

VAUX. 1661.

*Speculum Anni a partu Virginis, 1661.*

O R,

A New Almanack for the Year  
of the Worlds Redemption, 1661.

Being the first from the Bissextile or Leap-Year.

Calculated and composed for the Latitude, and Meridian of the ancient City of *Durham*, where the Pole Artick is mounted above the Horizon almost 55. degrees, and may serve without any sensible error for the most part of Great Britain.

By *John Vaux* of *St. Hilens Awek-land*, Philomathematicus.

The 4<sup>th</sup> Edition.

Fierce Boreas rends the stately Pine,  
Ambitious Tow'rs do Quake;  
Shafts that flie from Ioves hand Divine,  
The Lofly Mountains Shake.

*Est natura hominum novitatis avida Plinius.*

Bur thus saith the Lord, *Stand in the wayes and see, and ask for the old Paths, where is the good way, and walk therein, and ye shall find rest for your Souls,*  
Jer 6. 16.

LONDON, Printed by Gartrude Dawson, for  
the Company of Stationers.

**The Common Notes, and moveable Feasts, for this present year, 1661. according both to the English and Reformed account.**

refulgit, vesper, vesperago & longæ appellatur.*

**This bright shining Plannet is Orientall, or our Morning Star, this present Year, untill the 22 day of June, but from thence she is Occidentall, or our Evening Star, and so continueth untill the 13 day of April, 1662.**

**The**

## *The Contents of the Subsequent Calender.*

In the first Collumn is contained the number of daies In each month by Arithmetical figures.

In the second Collumn is contained the dayes of the week, by seven Letters.

In the third Collumn is contained the Festival days of each moneth the beginning and ending of Terms, with their severall Returns, with other daies of Note observed for Faires, &c.

In the fourth Collumn is contained the hours and minutes of Sun-rising, with us at North *Amckland*, which being doubled shews the length of the Night following.

In the fifth Collumn is contained the hours and minutes of Sun-setting there, which being doubled, shewes the lengths of the Night fore-passed.

In the sixth Collumn is contained the Signes in English, under which the Moon moveth.

In the seventh Collumn is contained the houres and minutes of the Break of the Day.

In the eighth Collumn is contained the quantity of Twylight for each day in the year.

*Crepusculum*, or Twylight (as one very well observes) seems to come a *Luce crepera*, *seu dubia*, because the Light is doubtful.

*Crepusculum est, quod tu nec tenebras; nec passis dicere lucem*, It begins to appear in the Morning by the access of the light of the Sun, and diffused orbicular reflexion of his beames: and in the evening it ends by the recess of the Suns light from the West Horizon. For the Ayre, as well before the rising of the Sun, as after his setting is a little bright, but scarce perceptible. Nevertheless the space of time, comprehended from the first appearance of the Suns beames, unto the complete rising of the Sun, and from the setting of the Sun unto the obscure coming of darknesse, is to be accounted part of the artificiall Night, the one called *Crepusculum Matutinum*, the other *Crepusculum Vespertinum*.

The *Crepusculum Matutinum*, or, Morning Twylight, begins when the sun is within 18. Degrees of the Horizon.

And the *Crepusculum Vesperinum*, or, Evening Twylight, ends when the sun is 18. Degrees under the Horizon: For you are to note, the Astronomers account it not night till the Sun be 18. Degrees below the Horizon, and therefore we may conclude it to be Continual Day from the first day of May, untill the 25 day of July in all which time the Sun descendeth not so low, under our Horizon in the Meridian of *Durham*:

### Admonitio ad Lectorem.

*Ubi in Calendario singulis fere diebus uniuscujusque Mensis Sanctorum ( quos vocant ) nomina apposit, id eo feci ( amice Lector ) non quod eas omnes pro Divis habeo, quorum aliquos ne in bonis quidem duco, aut quod aliqui ( si sanctissimi sint ) is divinum, cultum atque honorem, tribuendum censeo: sed ut rectarum quarundam rerum ( quarum statuta tempora noscere plurimum refert, quarumq; ignoratio nostris hominibus obesse possit ) quasi neta quædam sint atque indicia, Atque hac eundem hujus facti & instituti ratio esto.*

### De Octu solis Tetraſtica.

*Prævia flammiferi currus Aurora rubebat.*

*Extuleratque alto gurgite Phœbus equos.*

*Noctivagosque simul radijs flagrantibus ignis,*

*Depulerat calo, reddideratque diem.*

Note that the year of our Lord God, according to the Account used in *England*, for the dates of all Evidences, Records and Writings beginneth the 25. day of March, so that the 24. day of March is the last day of the year, 1660.

January hath xxxj. dayes.

Full Moon the 5 day, 29 min. past 9. in the forenoon.  
 Last quarter the 13. day. 55 min. past 2. in the afternoon.  
 New Moon the 20. day 33. min. past 2. in the aftern.  
 First Quarter the 27 day 2 min. past 7. in the morn.
